A Garst Special Announcement

it's **BYG**. really big!

Garst® is making BYG changes with corn technologies and their end use. Our **Blue + Yellow = Green (BYG)** initiative is a long-term commitment to securing Garst's leadership role in developing corn products and technologies for biofuels. Garst ExtraEdge™ corn hybrids — developed with qualities and characteristics specifically for the ethanol market — come from years of investment and research that's paying off at the pump. Garst growers now have more product choices for the rapidly expanding biofuels industry. Look for details soon on how you can take part in Garst's **BYG** success by qualifying to win a new "FlexFuel" 2007 half-ton Chevy Silverado — fueled by energy-efficient E-85 ethanol!

Garst **BLUE** plus corn-based ethanol **YELLOW** blends into **GREEN** benefits for the environment and the farm economy.
